1) What went well

Use of the Google Drive Document to sync the works.

Ideas, put on the documents so others can read and know what to do.

2) What did not go well

Communications.

3) what you would change if you were doing it again

Collaborations:

Planning the structures of the project beforehand, so the structure should be very well clearly showed the details so

team can read again whenever they can. Also, the visual of the structures can be in the Google Drive so can access easily as doing the works on doc.

Communications:

Clearly need to communicate very well with each other, keep up with the team members and ensure the process of the project is going well.

Need to assign each member to do what, when and how, beforehand so each member know what to do.

Meeting:

Should be shorter, quickly and know what to do in each meeting. Agendas. If not need, can just skip and focus on works.

Gabriela.
